Lead Technical Product Manager — Healthcare Data Products & Analytics

Product leader who owns roadmap, backlog, and delivery for a portfolio of 9 enterprise cloud data products on Azure Databricks and Snowflake, serving 450+ subscribers and supported by a team of four. Shipped the Transition of Care dashboard, which moved the organization from lagging claims data to leading ADT and authorization data — cutting reporting lag from 45 days to 2, with Finance reporting \$5M in additional savings. A decade in healthcare data spanning HEDIS, Star Ratings, risk adjustment, and utilization management, with CMS rule alignment and HIPAA-governed PHI handling built into every product.

SKILLS

Data Product Roadmaps · Product Discovery · Backlog Creation & Prioritization · Requirements & Acceptance Criteria · Azure Databricks · Snowflake · Data Governance · PHI & HIPAA Compliance · HEDIS · Star Ratings · Risk Adjustment (HCC) · Medicare Advantage · Quality Measures · Care Management · Executive Communication

EXPERIENCE

OPTUM SERVICES, INC.

Remote · 2014 – 2016, 2018 – Present

Lead Tech Product Manager

Feb 2022 – Present

- Own the roadmap, backlog, and delivery for 9 data products with a combined 450+ subscribers across business teams, Medical Directors, Finance, and IT.
- Run discovery directly with Medical Directors: capture their clinical goals, assess what the available data can actually support, and sequence the roadmap around what delivers value fastest — then refine through review sessions where stakeholder feedback drives the next iteration.
- Delivered the Transition of Care dashboard, the first product to move the organization from lagging claims data to leading ADT and authorization data: reporting lag fell from 45 days to 2, and coverage widened from patients with approved claims to all patient visits. Finance reports \$5M in additional transition of care savings this year.
- Replaced 50 legacy reports with governed data products, including a consolidation of 30+ SSRS reports into 2 dashboards on a shared enterprise data set — eliminating duplicate report maintenance and giving stakeholders one governed source for the same questions.
- Resolved an organization-wide dispute over readmission rate logic: documented each group's calculation, benchmarked the variants against CMS methodology, and presented the differences to the Medical Directors, who ratified a single agreed definition.
- Apply CMS rules to the definition of tracked clinical actions, and govern PHI and HIPAA handling requirements across the Transition of Care product and the rest of the data product portfolio.
- Lead a team of four defining the enterprise data sets behind the portfolio; those sets now feed at least three additional dashboards and are subscribed to by teams across IT and the business.

Lead Business System Analyst

Jun 2018 – Feb 2022

- Managed Business Intelligence reporting intake and prioritization across partner teams, defining requirements and functional specifications for reporting and analytics development.
- Developed Tableau policy and procedure standards that strengthened reporting governance and consistency across the organization.

Senior Business System Analyst

Nov 2014 – Nov 2016

- Defined reporting requirements, scope, and acceptance expectations for BI and analytics initiatives supporting HEDIS, Star Ratings, risk adjustment, and quality measure reporting.
- Coordinated code review and unit testing for a data warehouse project that achieved 98% delivery within deadline.
- Supported ICD-9 to ICD-10 reporting conversion with zero reported production errors.

Whataburger

San Antonio, TX · Nov 2016 – Jun 2018

IT Business Analysis Manager

- Managed the business analysis practice across IT, translating business priorities into requirements, product backlogs, and delivery plans.
- Implemented estimation and artifact standards that improved planning accuracy, budget visibility, and delivery readiness.

Clear Channel Communications

San Antonio, TX · Apr 2013 – Nov 2014

Business Analyst / Project Manager

- Defined requirements and functional specifications for digital outdoor product initiatives, coordinating estimates, timelines, and the transition toward Agile delivery.
- Improved backlog quality by reducing duplicate and misrouted items by 30%.

EARLIER EXPERIENCE

Robert Half Technology — Contractor, San Antonio, TX

Business analysis, project coordination, and COBOL-to-SQL data migration with SSIS import jobs for client technology initiatives.

Valero Energy Corporation — Retail Accounting Systems Project Manager, San Antonio, TX

Automated 90% of manual accounting processes and delivered a \$250K COBOL-to-SQL/.NET migration with SAP integration; built the training environment for a nationwide time-entry rollout to 10,000 employees.
